No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 49211, Application US/09270767
Patent No. 6703491
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
TITLE REFERENCE: File Reference: 7326-094
CURRENT APPLICATION NUMBER: US/09/270,767
CURRENT PILING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: PatentIn Ver. 2.0
LENGTH: 399
TYPE: PRT
                                                                                                                                        83 EDFMEKLAPTHWPPEKRVAYCFEVAAQRSPDKKTCPMKEGNPFGPFWDQFHVSFNKSELF

This represents a human heart O-fucosyltransferase that can glycosylate an epidermal growth factor (EGF) domain of a polypeptide with an activated O-fucose residue. Inhibitors of O-fucosyltransferase, e.g. mutants with increased affinity for the EFG domains, are used in diagnosis and treatment of conditions associated with overexpression of O-fucosyltransferase, to promote survival of sensory (retinal) neurons. Probes based on EGF domain polypeptide are used to detect gene

Example 1; Fig 12A; 90pp; English.

The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are oversxpressed in cancer tissues compared to normal tissues, and may thus converspressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of dancer in mammals. The invention also relates to nucleic acid and polypeptide of sequences at least 80% identical to the TAT mucleic acids and complexition and polypeptides, expression vectors and host cells comprising and mithodies, and methods and compositions fusion proteins comprising a contibodie, and methods and compositions for the treatment or diagnosis of cancer in mammals. TAT polypeptides, mucleic acids, antibodies, antagonists, binding molecules and compositions are useful antibodies, antagonists, binding molecules and compositions are useful concased TAT expression, particularly cancers such as breast cancer, increased TAT expression, particularly cancers such as breast cancer, cancer, panceatic cancer, particularly cancers, cancers of the central nervous system, melanome and leukaemia. TAT mucleic acids may further be chromosome identification and in gene therapy. The present sequence the represents a TAT polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180

The human O-fucosyltransferase can glycosylate an epidermal growth factor (EGF) fucosyltransferase can glycosylate an epidermal growth factor (EGF) of polymetric with an activated O-fucose residue. Inhibitors of domains, are used in diagnosis and treatment of conditions associated with overexpression of O-fucosyltransferase, to promote survival of sensory (retinal) neurons. Probes based on EGF domain polypeptica are used to detect gene amplification and expression. The expression can also be determined at the protein level using antibodies specific for O-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            production of other cytokines in other cell populations. The polymetides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity indian activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAKESESB1), 2111 (AAKESESB2) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acids encoding polypeptides with cytokine-like activities, useful
                                                                                                                                                                                                                                                                        Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorder; arthritis; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ZW.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Y;

The invention relates to polynuclectides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynuclectides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity actor activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, archritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               121

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8
                                                                                                                                                                                                             This represents a published partial human sequence of unknown function from a myeblast cell line. The invention provides a human heart Ofucosyltransferase enzyme that can glycosylate an epidermal growth factor (EGF) domain of a polypeptide with an activated Ofucose residue. Inhibitors of Ofucosyltransferase, e.g. mutants with increased affinity for the BFG domains, are used in diagnosis and treatment of conditions associated with overexpression of Ofucosyltransferase, to promote polypeptide are used to detect gene amplification and expression. The expression can also be determined at the protein level using antibodies specific for Ofucosyltransferase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryoces for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABBE7737) and the encoded proteins (ABBE7737) prints appearance (ABL01840-ABL16175) and the encoded proteins (ABBE7737) prints appeared and for this patent did not form part of from MIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              67 YFKLEPLQAYHRVISLEDFMEKLAPTHWPPEKRVAYCFE----VAAQRSPDKKTCPMKE 121

AAD07571-AAD07645 represent cDNAs corresponding to 25 human secreted protein genes, and AAD03162-AAB0312 represent the proteins they encode. Parcein genes, and AAD03162-AAB0312 represent the proteins they encode. AAB03127-AAB03150 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing. C. reacting or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the camount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the and include developing products for the diagnosis or treatment of the and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, C. Albs, and inclumnation, and callergies, neurological disorders (e.g., Alzheimer's disease, Parkinsons's disease), cognitive disorders, schizophrenia, asthma, skin
                                                                       Human; secreted protein, proliferative disorder; cancer; tumour; foetal abnormality; developmental abnormality; haematopoietic disorder; infamune system disorder; ALDS; autoimmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; Alzheimer's disease; Parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosalerosis; cardiovascular disorder; angiogenic disorder; kidney disorder; gastrointestinal disorder; propagancy-related disorder; gene therapy; cendocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive; chromosome 3; binding partner identification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acids encoding 25 human secreted polypeptides, useful for preventing, diagnosing and/or treating e.g. Gaucher's disease, Alzheimer's disease, Scimitar syndrome, Creutzfeldt-Jacob disease, diabetes mellitus and multiple sclerosis.
                                        Human gene 18 encoded secreted protein HMWEY26, SEQ ID NO:144.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ruben SM, Komatsoulis GA, Shi Y, Olsen HS, Soppet DR;

disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, angiogenic disorders, kidney disorders, gastrointestinal disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound clisorders, and infections. The proteins can also be used to aid wound the aling and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemctaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunosasys e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human corrected protein of the invention

The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HA, also known as human serum atbumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders disease, ulcarative colitis), immune disorders (e.g. crohn's disease, ulcarative colitis), immune disorders (e.g. acquired haemacopoietic disorders, neural disorders (e.g. Alzheimer's, Parkinson's, Creutzfeldt-Jacob disease, encephalomyelitis, meningitis, schizophrenia), and connective disorders (e.g. osteoporosis, arthritis). ABG63326-ABG65518 represent albumin fusion proteins of the invention ö 266 BIQRAVKLWVRSLDAQSVYVATDSESYVPELQQLFKGKVKVVSLKPEVAQVDLYILGQAD 325 206 HLVRPYVGIHLRIGSDWKNACAMLKDGTAGSHFMASPQCVGYSRSTAAPLTMTMCLPDLK 265 65 6 HFARTYPGIHLRIGSDWKNACAMLKDGTAGSHFWASPQCVGYSRSTAAPLTWTMCLPDLK Gaps . 0 Length 165; Indels 40.9%; Score 809; DB 5; Le 96.9%; Pred. , treating, prevent anemia, arthritis, New albumin fusion proteins, useful for diagnosing, treatior ameliorating diseases or disorders e.g. cancer, anemia, asthma, inflammatory bowel disease or Alzheimer's disease

Disclosure; SEQ ID NO 366; 279pp; English

The trivention relates to a noneal albumin tutaton procesin.

The trivention relates to a composition comprising the albumin fusion protein

and a pharmaceutical carrier; a kit comprising the albumin fusion protein

and a pharmaceutical carrier; a kit comprising the albumin fusion protein in the pharmaceutical carrier; a kit comprising the composition of the albumin fusion protein; a method of treating a petient with a disease or disorder that a method of treating a petient with a disease or disorder that is mothalized by Therapeutic protein; a vector comprising the muclaic acid molecule of the albumin fusion protein; and a host cell captumin fusion protein; and a host cell comprising the nuclaic acid molecule of the albumin fusion protein; and a host cell comprising the nuclaic and into compositions have the following comprising the nuclaic and into compositions have the following cardiant, notropic, antihilamentory, antipodiator, antiatrhythmic, excivities: cycoetaric, antihalamentory, antipodiator, antiatrhythmic, or ardiant, notropic, antihilamentory, immunosubprosective, antipodiator, insulational protein and values of sequence of comprising indication; Y. The disease of disorders include:

Comprising the nuclaic diseases (e.g. anaemia, Hodgkin's disease, outer language methors and values of the albumin fusion protein in the comprosective antipodiator, bone, breast, laver or lung cancers, comprising indication; Y. The disease or disorders include:

Comprising indication; Y. The disease or disorders include:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        o,
                                                                                                                                                                                                                                                                                                                                                                       This represents a the N-terminal sequence of the human heart O-fucestivansferase that can glycosylate an epidermal growth factor (EGF) domain of a polypeptide with an activated O-fuces residue. Inhibitors of O-fucesyltransferase, e.g. mutants with increased affinity for the EFG domains, are used in diagnosis and treatment of conditions associated with overexpression of O-fucesyltransferase, to promote survival of sensory (retinal) neurons. Probes based on EGF domain polypeptide are used to detect gene amplification and expression. The expression can also be determined at the protein level using antibodies specific for O-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 MPAGSWDPAGYLLYCPCMGRFGNQADHFLGSLAFAKLLNRTLAVPPWIEYQHHKPPFTNL 60
                                                                                                                                                                                                                                                                                                           Human O-fucosyl:transferase able to glycosylate epidermal growth factor domains - useful for diagnosis and treatment of diseases involving overexpression of the enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 MPAGSWDPAGYLLYCPCMGRFGNQADHFLGSLAFAKLLNRTLAVPPWIEYQHHKPPFTNL

This represents the N-terminal sequence of CHO O-fucosyltransferase. The enzyme can glycosylate an epidezmal growth factor (EGF) domain of a polypeptide with an activated O-fucose residue. Inhibitors of O-fucospiltransferase, e.g. mutants with increased affinity for the ERG domains, are used in diagnosis and treatment of conditions associated with overexpression of O-fucosyltransferase, to promote survival of sensory (retinal) neurons. Probes based on EGF domain polypeptide are used to detect gene amplification and expression. The expression can also be determined at the protein level using antibodies specific for O-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human, nucleic acid-associated protein, NAAP; gene therapy; microarray; proliferative disorder; developmental disorder; cardiovascular disorder; neurological disorder; autoimmune disorder; inflammatory disorder; atheroscierosis; bursitis; cirrhosis; hepatitis; psoriasis; cancer; lymphoma; melanoma; brain cancer; brast cancer; Cushing's syndrome; alzielanoma; adisease; AlDS; Creutzfeldt-Jakob disease; acquired immunodeficiency syndrome; Goodpasture's syndrome;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human O-fucosyl:transferase able to glycosylate epidermal growth factor domains - useful for diagnosis and treatment of diseases involving voverexpression of the enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             3 AGSWDPAGYLLYCPCMGRFGNQADHFLGSLAFAKLLNRTLAVPPWIEYQHHKPPFTNLH 61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    3 AGSWDLAGYLLYXPXMGRFGNQADHFLGSLAFAKLXVRTLAVPPWIEYQHHKPPFTNLH 61

The invention relates to an isolated human nucleic acid-associated protein (NAAP), comprising the protein sequences appearing as ABG95644-protein (NAAP), comprising the protein sequences appearing as ABG95644-comprising the protein sequence appearing as ABG95644-comprising the nucleotides, a recombinant computed the nucleotide are comprising polymucleotides, a recombinant NAAP promogenic organism, an anti-NAAP antibody, screening compounds as modulators or antigonists of NAAP or modulators or antigonists of NAAP or modulators of NAAP polymucleotide expression, a microarray comprising 30-60 mucleotides of the NAAP polymucleotides and generating an expression profile of a sample that contains NAAP polymucleotides. The polypeptide, polymucleotide and agonist are useful for treating a disease or condition associated with decreased expression of functional NAAP. The antagonist overexpression of functional NAAP. The antibody that specifically binds to the polypeptide is useful for diagnosing a condition or disease controlated with the expression of NAAP. These diseases include associated with the expression of NAAP. These diseases include to rutcing an antipoly that specifically binds to inflammatory disorders. These polypeptides, polymucleotides, agonists and antagonists may also be used for preventing these diseases. These conditions associated with horder atherned with functional NAAP expression also includes a phaened for preventing these diseases. These diseases or conditions associated with functional NAAP expression also includes a phaened for preventing these diseases. These diseases or conditions associated with expression also ensed for preventing these diseases. These polymediated when the phaened for preventing these diseases. These polymediated when the phaened for preventing these diseases. These polymediated when the phaened for preventing these diseases.
                                                                                 for diagnosing, treating or preventing cardiovascular, neurological, autoimmune or inflammatory disorders, e.g. atherosclerosis, Alzheimer's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             syndrome (AIDS), Creutzfeldt-Jakob disease, Goodpasture's syndrome, Crohn's disease, or multiple sclerosis and many other diseases and conditions listed in the specification. The present sequence represents
human nucleic acid-associated proteins and polynucleotides, useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  includes atherosclerosis, bursitis, cirrhosis, hepatitis, psoriasis, cancers (e.g. lymphoma, melanoma, brain cancer or breast cancer), Cushing's syndrome, Alzheimer's disease, acquired immunodeficiency
                                                                                                                                                                                                                                                                                                                                                                                                    Claim 1; Page 193-194; 219pp; English

                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG175 and the encoded proteins (ABBS7737-ABB12072). The sequence data for this patent did not form part of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated nucleic acid detection reagent for detecting 1000 or more
genes from Drosophila and for elucidating cell signaling and cell-cell

The present invention relates to a method for identifying a compound that inhibits the activity of a protein essential for Drosophila viability. The method comprises: (a) expressing in a recombinant host a DNA sequence encoding a protein essential for Drosophila viability. (b) testing compounds suspected of having the ability to inhibit the activity of the protein expressed in (a); and identifying to inhibit the activity of the protein essential for Drosophila viability for use as insecticial especial in identifying a compound that inhibits the activity of a protein essential for brosophila viability for use as insecticial, ectoparasiticial, antihelminthic or acaracidal agent. The present sequence is one such protein essential for Drosophila viability. Note: The specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                       US-09-774-954-2

Glycobiology 6:837-842(1996).
-!- FUNCTION: Catalyzes the reaction that attaches fucose through an
O-glycosidic linkage to a conserved serine or threonine residue in
EGF domains.
                                                                                                                      -!- CATALYTIC ACTIVITY: Transfers an alpha-L-fucosyl residue from GDP-beta-L-fucose to the serine hydroxy group of a protein acceptor.
-!- COFACTOR: Manganese.
-!- PATHWAY: Glycosylation.

GDP-fucose protein O-fucosyltransferase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                        Isold-094488-2; Sequence=VSP_001809;
Note=No experimental confirmation available;
Note=No experimental confirmation available;
-i-TISSUE SPECIFICITY: Highly expressed in heart, brain, placenta, lung, liver, skeletal muscle, kidney and pancreas.
-i-SIMILARITY: Belongs to the glycosyltransferase 68 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Match 90.5%; Score 295; DB 1; Length 388; Local Similarity 91.5%; Pred. -!- FUNCTION: Catalyzes the reaction that attaches fucose through an O-glycosidic linkage to a conserved serine or threonine residue in EGF domains (By similarity).

-!- CATALYTIC ACTIVITY: Transfers an alpha-L-fucosyl residue from GDP-beta-L-fucose to the serine hydroxy group of a protein acceptor.

-!- COFACTOR: Manganese (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0; Gaps
